Dr. Muhammad Tariq is the current country director for GHSC-PSM in Pakistan, managing a portfolio of \$52 million of USAID assistance under supply chains systems and COVID ARPA cooperations with the Government of Pakistan. Tariq has demonstrated and successful experience for public policy, health sciences implementation, supply chain, national and global health security, digital health, and data analytics. Tariq's voluntary services began by addressing the health of people and communities of Southern districts of Punjab province including nomadic concentrations in the Chulistan desert. He transformed supply chain public policy and produced impact for sustainable development, significant health financing, and a number of health system strengthening improvements since 1987. He has been an affiliate faculty at the Center for AIDS Research (CFAR); International Health Program, Daniel J Evans School of Public Affairs, Health Services Academy and earned a Master of Public Health degree from the University of Washington with concentration in Global Health. Tariq has been the key support for initiating and successfully executing Family Health International (FHI), Population Services International (PSI) and John Snow, Inc. He has been managing diverse funding sources from USAID, DfID, World Bank, GFATM, Gates Foundation, SIDA, and Public Sector Development Programs.

Tariq, provided technical assistance to African, Asian and Middle Eastern countries for more than nineteen years related to Health Systems, FP, HIV/AIDS, TB, EPI, Pandemics, Supply Chain Management (SCM), Public Private Partnership, and institutionalization of Advocacy, Communication and Social Mobilization (ACSM) within public sector service delivery systems.

As the lead proposal writer, Tariq led mobilization of \$43 million from GFATM R9 HIV/AIDS; \$132m for contraceptive product and transportation financing; and more than \$180 million leveraged towards public health supply chains, health commodities, warehouse rehabilitation, procurement and workforce capacity development, transportation, supply chain M&E and LMIS to make health products available thus saving lives of women, children and men.

With USAID, UNICEF, BMGF, WHO, Gavi Alliance support to the Government of Pakistan; Tariq and his team at the GHSC-PSM Program are leading and establishing models of supply chain systems strengthening for the national and global health security. FP, EPI, MNCH, and Basic Health Services.

professors of virology, bacteriology and mycology. His policy related products around biosafety, health systems and supply chain standards can be viewed at <https://lmis.gov.pk/> under publications.

August 2009 to June 2016

John Snow, Inc.

Islamabad, Pakistan

Country Director

After the USAID-Pakistan 2008 assessment on supply chain system gaps, Tariq initiated the USAID | DELIVER field office in 2009 with a seed money of \$1.2m. He provided strategic management for a sustainable supply chain, logistics and health systems strengthening solutions to the federal, provincial, and regional governments. Tariq maintained extraordinary relations and liaised with healthcare delivery and technology sectors, donors and international partners for laying the foundation. He recruited and supervised technical staff and represented the project at various fora. Until June 2016, Tariq successfully deployed a country wide LMIS system for family planning, immunization and TB. He engaged public universities to offer supply chain certifications and credit courses to MPH and Health Economic degree students for the very first time. In 2013, Tariq piloted GS1 standardization at three levels, the findings contributed to WHO and UNICEF track and trace global guidelines for the pharmaceutical industry. Under a global winding up, Tariq closed out Pakistan Field Office in June 2016 where project reached operations worth \$170m. During these times, Tariq managed a team of 110 members across Pakistan and enabled systems, policies, standards for better governance and accountability of FP, EPI and TB related public health supply chain and systems. Details of his accomplishments can be viewed at website www.muhammadtariq.info
